

Date: 31 th May 2017	EloviCoft Coftware Deleges Note	RN-SW-v2.34
Software Version: 2.34	FlexiSoit Soitware Release Note	

1. New Software Version:

FlexiSoft version 2.34 is now available. You can download it from our website using following link: <u>http://www.renuelectronics.com/software.htm</u>

Version 2.34 is an update for version 2.33. If you are using an earlier version (prior to v2.33), then you need to install version 2.33 before using this update.

2. New Features:

2.1 Support for Hardware Interrupt for FL Series PLC's

Now user can configure hardware interrupt in the FL series PLC which have I/O's on the base in this the user can define the interrupt to any input, the hardware interrupt node will be visible below timer interrupt.

By right clicking on the hardware interrupt node the two options will come

New Logic block will create the block1, block2... for writing the logic to be executed while interrupt is sensed in the system.

In Interrupt Configuration, the user will configure the interrupt as the window will be visible

	Interrupt Block	Channel Configuration	^
•	Block2		
	Block3		
	Block4		

Double Clicking on the channel configuration area in front of Block (Highlighted in Blue color) will open the channel to be assigned to the block.

Inter	rrupt C	onfiaur	ation			×							
<u>ا</u>		Chann	Channel Configuration [Block2]										
	Inte		Group	iroup A 🗸 🗸		^							
•	Bloc		G	roup A									
	Bloc		Channel Number	roup B	Falling edge								
	Bloc	•	Channel 1										
			Channel 2										
			Channel 5										
			Channel 6										
			Channel 7										
			Channel 8										
<					OK Cance								
		-			Close	Help							

We can define the priority to the interrupt as we have Group A, Group B and Group C depending on the products and depending on the priority we can also trigger it on rising and falling edge of the inputs.

Ex- If we assign channel 1 rising edge with Group A to block1 and channel 2 falling edge with Group B to block 2 then if the channel 1 rising edge will come block1 will execute and channel 2 falling edge will come then block2 will execute and if both the interrupt condition will come at a time then block1 will execute as the block1 falls under Group A and then the block2 will execute.

Note: - Interrupt functionality is not available for expansions connected to the PLC's.

2.2 I/O configuration windows for expansion

While assigning any expansion in the PLC /HMI with IO or the PLC/ HMI with inbuilt IO, In IO allocation tab we will get one option to configure it as per our requirement. We can now configure analog card channels to be mA, Voltage, RTD etc. and for high speed digital expansion we can configure PWM and HSC through this functionality. When we assign the expansion, the following option will come

		IOLI I SIOLI	2 30013	Slot14 S	lot15 S	lot 16	
Base Unit	Slot1	Slot2 Sl	ot3 Slot4	Slot5	Slot6	Slot7	Slot8
Income							
Imag							
	Ξ	E 100					
		L 00 -					
		S S 5					
		1 2					
		6 8 1		Model	EL 005-1	616RP0	2011
		6 0 0		model	12003-1		2011
		P 🗧					
		2 2 1					
		1 8 8					
		8 9		Dow	nload Co	onfigurati	ion Settings
	-						

The check box Download Configuration Settings is checked then only the configuration will get downloaded if it is unchecked then the configuration done will not apply to unit and the

checkbox is applicable separately to each base and expansions so if we checked the slot1 checkbox and slot2 checkbox is unchecked then configuration for slot1 will only work. Configure will open the below window in which user will configure the channels as per the requirement and press confirm button then the configuration will be shown in preview window.

FL005-1616RP0	201L Config	uration							
Digital Analog									
HSC Input									
Channel	Channel1	\sim	Configuration	Not Defined	~				
Output (Preset)	None	\sim	Reset Input	SW or HW	\sim				
Edge	Falling Edge	\sim	Preset	0	* *				
PWM Output									
Channel	Channel1	\sim	Configuration	Not Defined	~				
Settings Preview				[Confirm				
Channels		Configur	ation						
HSC Channel1		Not Defined							
HSC Channel2		Not Defined							
PWM Channel1		Not Defined							
PWM Channel2		Not Defi	ined						
Analog Input Cha	annel1	Not Defi	ined						
Analog Input Cha	annel2	Not Defi	ined						
Analog Output C	hannel1	Not Defi	ined						

2.3 Frequency of Pulses/Rate Functionality

Now the user will get the Frequency of pulses or rate of pulses to be received on High speed inputs in FP3 I/O's and FP2020 variants models. The user will get the Frequency/Rate at the (SlotXX-CHX_Rate_Reg) register and the user need to give the span on which the rate will be calculated to (SlotXX-CHX_Rate_Span_Register) register.

2.4 Auto slave address mapping of tags for Modbus Slave protocol

Now the user can use this option to assign slave address to all tags in IEC for Modbus slave protocol instead of assigning address to every tag this will save time for Modbus slave mapping in IEC.

If the Modbus Slave is defined in Com port then in tag database the two options will be visible Assign Sequential addresses and Remove mapping addresses and the two options will assign and remove the slave mapping addresses in the tag database.

Com 1			Com 2	Ethernet		Ĩ			
000015	~	Cop	y Com 1 To Com 2	1		1			
000042	~	Сор	y Com 1 To Ethern						
000041	41 Assign Sequential addresses								
400061	~	Rem	ove mapping addr	esses					
000052			000052	000052					
400120			400120	400120					
400125			400125	400125					
000013			000013	000013					
400020			400020	400020					
000006			000006	000006					
			000050	000050					

2.5 Project Optimization option to delete unwanted files and images

While doing many applications sometimes we use images in our application and delete or use it multiple times with varied sizes which FlexiSoft saves for undo option so to delete unwanted files from the backup folder of the FlexiSoft to make the application size small to mail or transfer in Tools menu new option is added.

🖶 FlexiSoft\OffLine	\FP3102	T\FP3102	TApp.pzm	1

	Taska						

2.6 User defined protocol models support for Modbus

The user can now configure different word size in Modbus master protocol the earlier option for 1 Word, 10 Words, 16 Words will also be available.

Protocol	Modbus RTU (Unit a	as Master)		~	Protocol	Modbus RTU (Unit as Master)					
Model	16 words	~		Words	Model	User Defined	~	/ 14	Words		
Communica	ti 1 words				Communica	tion Settings					
Dov	10 words 10 words/Fuii Driver)				Dov	Download Communication Parameters					
Baud Ra	Enron Modbus User Defined		8	~	Baud Ra	ate 9600 ~	Data Bits	8	~		
Parity	Even ~	Stop Bits	1	~	Parity	Even ~	Stop Bits	1	~		
Power	On PLC Communication	n Time (0 to 255	Seconds)		Power	On PLC Communicatio	on Time (0 to 255	Seconds)			

2.7 Pen Size and fonts setting for trends object.

The trend object will have one more option for pen-size from 1-5 and the font setting will now apply to the messages as well as X and Y axis texts.

2.8 Needle thickness option for Analog Meter object.

The analog meter object will have one more option for needle thickness from 1-5.

2.9 Tag type reconfigurable in tag database in IEC.

Now user can change the type of the tags he created in tag database from INT to WORD, WORD to DWORD etc. if user has created any tag and didn't use it anywhere in the project or used it in ladder only then he can change the tag type of the tag.

2.10 Default Port number for different protocols

When we select the different protocols on the Ethernet Port then the respective port number for the protocols will be assigned automatically to establish communication however user can change it and save in their application too.

Renu Electronics Pvt. Ltd. Survey No. 2/6, Baner Road, Pune – 411045, INDIA Phone: 91-020-27292840 Fax: 91-020-27292839

2.11 Shortcut button for tag database

The user can switch to tag database window without scrolling through the project tree, the tool button is available now to access tag database directly.

3.	1			-	-	•	Q	10	0		- 2) 📰	÷		1	6	$\overline{\{^{\frac{1}{2}}\}}$	ĒC	17
2	8	2	24	×	2	9		C	16	1%	*	<u>هک</u>	1	4	>	«	≫	19		

3. Backward compatibility:

All applications created with previous version of FlexiSoft are compatible with FlexiSoft v2.34 update.

4. Known Issues:

- 1. While configuring HSC and PWM through IO Wizard the user needs to turn off the HSC and PWM enable bit first then download the application, or if the bit is left ON then user needs to turn it ON again and then turn OFF then the new configuration will get applied and will work after PWM/HSC enable bit is on.
- 2. The Compact Logix or Logix 5000 PLC communication are not working.
